## INTRODUCTION TO THREE DIMENSIONAL GEOMETRY

Let O be a fixed point known as origin and let OX, OY and OZ be three mutually perpendicular lines, taken as $x$-axis, $y$ axis and z -axis respectively in such a way that they form a right - handed system.

The planes XOY, YOZ and ZOX are known as xy-plane, yz-plane and $z x-$ plane respectively.
Let $P$ be a point in space and distances of $P$ from $y z, ~ z x$ and $x y$-planes be $x, y, z$ respectively (with proper signs), then we say that coordinates of P are ( $\mathrm{x}, \mathrm{y}, \mathrm{z}$ ). Also $\mathrm{OA}=\mathrm{x}, \mathrm{OB}=\mathrm{y}, \mathrm{OC}=\mathrm{z}$.

## Distance Formula

If $\mathrm{P}\left(\mathrm{x}_{1}, \mathrm{y}_{1}, \mathrm{z}_{1}\right)$ and $\mathrm{Q}\left(\mathrm{x}_{2}, \mathrm{y}_{2}, \mathrm{z}_{2}\right)$ are two points, then distance between them $\mathrm{PQ}=\sqrt{\left(\mathrm{x}_{1}-\mathrm{x}_{2}\right)^{2}+\left(\mathrm{y}_{1}-\mathrm{y}_{2}\right)^{2}+\left(\mathrm{z}_{1}-\mathrm{z}_{2}\right)^{2}}$

In particular distance of a point ( $x, y, z$ ) from origin $=\sqrt{x^{2}+y^{2}+z^{2}}$.

## Section Formula

Coordinates of the point dividing the line joining two points $\mathrm{P}\left(\mathrm{x}_{1}, \mathrm{y}_{1}, \mathrm{z}_{1}\right)$ and $\mathrm{Q}\left(\mathrm{x}_{2}, \mathrm{y}_{2}, \mathrm{z}_{2}\right)$ in the ratio $\mathrm{m}_{1}: \mathrm{m}_{2}$ are

(i) In case of internal division
2. Distance of the point $(x, y, z)$ from $y$ axis is-
(A) y
(B) $\sqrt{x^{2}+y^{2}}$
(C) $\sqrt{y^{2}+z^{2}}$
(D) $\sqrt{\mathrm{z}^{2}+\mathrm{x}^{2}}$
(ii) In case of external division
$\left(\frac{m_{1} x_{2}-m_{2} x_{1}}{m_{1}-m_{2}}, \frac{m_{1} y_{2}-m_{2} y_{1}}{m_{1}-m_{2}}, \frac{m_{1} z_{2}-m_{2} z_{1}}{m_{1}-m_{2}}\right)$
Coordinates of the Mid point :
When division point is the midpoint of PQ , then ratio will be $1: 1$; hence coordinates of the midpoint of PQ are $\left(\frac{\mathrm{x}_{1}+\mathrm{x}_{2}}{2}, \frac{\mathrm{y}_{1}+\mathrm{y}_{2}}{2}, \frac{\mathrm{z}_{1}+\mathrm{z}_{2}}{2}\right)$

## Centroid of a Triangle :

If $\left(\mathrm{x}_{1}, \mathrm{y}_{1}, \mathrm{z}_{1}\right),\left(\mathrm{x}_{2}, \mathrm{y}_{2}, \mathrm{z}_{2}\right)$ and $\left(\mathrm{x}_{3}, \mathrm{y}_{3}\right.$, $z_{3}$ ) be the vertices of a triangle, then the centroid of the triangle is

$$
\left(\frac{\mathrm{x}_{1}+\mathrm{x}_{2}+\mathrm{x}_{3}}{3}, \frac{\mathrm{y}_{1}+\mathrm{y}_{2}+\mathrm{y}_{3}}{3}, \frac{\mathrm{z}_{1}+\mathrm{z}_{2}+\mathrm{z}_{3}}{3}\right)
$$
